

EcoMix (PE)

Properties

EcoMix is made from polyethylene (PE) and carefully selected recycled plastic fractions such as used fishing nets and plastic bottles. Our EcoMix contains from 33% to 93% recycled post-consumer plastic (e.g. bottles), while the remaining content consists of recyclable plastic to ensure high durability and a wide range of colour options.

Process

From experience to material innovation

The anthracite colour was developed for our LOOP product family in recycled material and achieved the Nordic Swan Ecolabel. The material innovation behind this colour formed the foundation for EcoMix. At out-sider, we believe sustainable materials should be visible, and EcoMix expresses recycled plastic through an honest, distinctive surface.

Designed for urban environments

EcoMix has a subtle stone-like appearance, created naturally by the recycled plastic composition. The textured surface makes dirt, scratches and wear less visible, helping furniture maintain its visual and functional quality in demanding outdoor spaces.

EcoMix is made from polyethylene (PE) and selected recycled plastics such as fishing nets and bottles. It contains 33–93% recycled content, depending on colour. The remaining recyclable PE ensures durability and colour flexibility.

EcoMix benefits

Maintenance-free

Practical and cost-effective:
Requires no maintenance
and easy to clean

Long lifespan

Designed for long-term durability,
with a lifespan of up to 30 years

Sustainable

Recyclable PE, can be ground
and reused up to 7 times.
*Also available in an
eco-labeled version*
