

Rectangular planter consisting of two half-shells with the addition of two extensions and a bottom, all in 2 mm thick folded sheet steel. At the bottom a stainless steel overflow screwed to the bottom guarantees a water reserve for vegetation. The planter is available in corten steel, which is sandblasted and oxidised, in brushed stainless steel, and in steel. All metal parts are galvanised and coated with thermosetting polyester powder, also two-tone (except for corten steel and stainless steel versions). The parts are mechanically assembled using stainless steel screws and special vertical seals. Freestanding with adjustable feet M10 for levelling.
