

Square planter consisting of two half-shells and a bottom, all made of 2 mm thick folded steel sheet. At the bottom, a stainless steel overflow screwed to the bottom guarantees a water reserve for vegetation. The planter is available in corten steel, which requires a special sandblasting and oxidation cycle, in brushed stainless steel, and in steel. All metal parts are galvanised and coated with thermosetting polyester powder, also two-tone (except for corten steel and stainless steel versions). The parts are mechanically assembled using screws and special vertical seals. Freestanding with adjustable feet M10 for levelling.
